

Import Data

Data Preprocessing:
Checking Null Values- Replacing Null values with median of the column
Checking negative values (which parameter can take -ve values which not)

Feature Engineering:
Checking Skewed columns (Changing column with skewed data with log)
Feature Importance:
Using PCA
Using Random Forest
Using XGBoost Shap Values

Feature Engineering:
Checking Skewed columns (Changing column with skewed data with log)
Feature Importance:
Using PCA
Using Random Forest
Using XGBoost Shap Values

Model Training:
Linear Regression
Ridge Regression
SVR
Random Forest
XGBoost

Selected XgBoost For final model selection as RMSE and MAE is Low in both Train and Test data, R2 score have quite high gap but have lower gap from all other models that I tried.
